**NATURAL BODY SPA & SHOPPE BROOKHAVEN FACT SHEET**  
*First Platinum LEED Certified Spa in the United States*

**LOCATION:** Village Place Brookhaven on Dresden Drive  
**LEED CONSULTANT:** Holley Henderson founder of Atlanta-based H<sup>2</sup> Ecodesign  
**BUILDER:** Dan Woodley Communities

**KEY LEED COMPONENTS:**

- **Alternate Transportation** – The spa promotes traveling in a fuel efficient manner, located less than a half mile from MARTA with bike racks and showers for safety and comfort of bikers.
- **Climate Control** – Multiple areas are equipped with units to efficiently regulate and maintain temperature.
- **Education** – Signage framed with reclaimed wood is displayed throughout the spa illustrating the efforts made in the space to create a healthy, efficient and environmentally safe spa experience.
- **Energy Reduction Lighting** – By using light-emitting diode (LED) lighting and occupancy-sensors, a 35% reduction in energy usage is achieved.
- **Energy Star Appliances** – These washers and dryers significantly reduce the amount of electrical energy necessary to clean linens and towels.
- **Green Housekeeping** – A regional supply company provides recycled or recyclable paper and plastic products for use in the spa. Effective cleaning products with environmentally safe ingredients, such as Mrs. Meyers, Seventh Generation and BC Green, are used.
- **Green Power** – Renewable Energy Credits are purchased to offset the production of non-renewable energy sources and reduce dependence on fossil fuels.
- **Low-emitting Materials** – Volatile Organic Compounds (VOCs) in manufacturing products such as glue, paint and sealer emit pollutants that contribute to low air quality. The spa uses low or no VOC products in build-out.
- **Rapidly Renewable Resources** – Cabinets are created from wheatboard and bamboo, two raw materials that quickly replenish in nature.
- **Recycled Building Materials** – Rubber floor tiles contain as many as 7.5 recycled tires for every 100 square feet of flooring, and flooring in treatment areas contains recycled content.
- **Reuse** – A portion of interior décor and fixtures are from other Natural Body locations, antique shops and artisan craftspeople.
- **Site Selection** – The Village Place Brookhaven location was carefully chosen because of its high population density.
- **“Slow” production** – Local craftsmen created fixtures and in-spa furniture, cutting down on fuel expenses and transportation.
- **Water Conservation** – Low flow plumbing fixtures and dual-flush toilets ensure water savings of nearly 40%.
